# Mgr. Zsolt Varjú
## Fronted Developer

Experienced Remote Web Page Tester with a proven track record of working closely with frontend developers, which has ignited my passion for frontend development. Currently transitioning into a frontend developer role, with a focus on Next.js and React projects. I am dedicated to creating accessible, mobile-first websites that bring design files to life with seamless functionality and exceptional user experience.

## Education

**Master's degree of Applied Informatics**

University of Constantine the Philosopher

## Skills

- Agile workflow
- Responsive design
- Calm under pressure
- Decision-making

## Software

- HTML
- CSS
- TailwindCSS
- SASS
- JavaScript
- TypeScript
- Headless-CMS
- MERN - stack
- NEXT.js
- Docker
- Figma
- Postman
- GIT
- Strapi

## Language

| Hungarian | Mother language |
|-----------|-----------------|
| Slovak | Fluent |
| English | Fluent - B2 |

## Experience

**2022 - to Present**
Galileo Corporation s.r.o

**Quality Assurance Tester**

- As a Remote Web Page Tester, I specialize in ensuring the functionality and visual accuracy of newly created web pages. My primary responsibilities include:
- **Functionality Testing:** Conduct thorough manual testing of web pages to verify that all features operate correctly in various browsers and devices. Identify any discrepancies or bugs and report them promptly.
- **Visual Consistency:** Assess the visual appearance of web pages to ensure they match the provided graphic design specifications. Communicate any deviations to the relevant team members, providing detailed feedback on necessary corrections.
- **Quality Assurance:** Maintain high standards of quality by rigorously testing the majority of web pages in Slovakia. Ensure that all web pages meet the required specifications and user expectations.
- **Communication:** Collaborate effectively with designers, developers, and project managers to address any issues found during testing. Offer suggestions for improvements and clarifications when needed.
- **Remote Work:** Manage all tasks independently while adhering to strict deadlines. Utilize effective time management skills to complete testing tasks efficiently and accurately.
- **Documentation:** Maintain detailed records of test results, issues identified, and corrective actions taken. Provide comprehensive reports to the relevant stakeholders.

## Projects

**Portfolio - www.zsoltvarju.com**

In my portfolio project, I'm using Next.js as the frontend framework and Strapi as the headless CMS, connected through a RESTful API. Next.js is responsible for the user interface, taking advantage of both server-side rendering and static generation for better performance and SEO. On the backend, Strapi handles the content management, providing a dynamic and flexible solution for storing and managing content. The RESTful API ensures that there's seamless communication between Next.js and Strapi, enabling smooth and efficient data transfer across the frontend and backend. This setup allows the project to be scalable, maintainable, and optimized for fast loading times.

**InfoMapSK - www.infomap.sk**

The website is developed using the MERN stack, where I crafted both the frontend and backend. It processes and visualizes data sourced from the API of the Statistical Office of Slovakia, initially in JSON-stat format. We've successfully transformed this data into a format that's optimized for visualization. The site includes a search field and an interactive map of Slovakia, enabling users to select a geolocation. Based on this selection, it visualizes open data in various categories, providing a user-friendly and informative tool for exploring statistical data specific to different regions of Slovakia.
